

112 學年度高中部英文作文比賽

1. Title: "The Impact of AI Chatbots on Human Life: Challenges and Personal Strategies"

Instructions:

In recent years, Artificial Intelligence (AI) has taken the world by storm. AI, particularly in the form of chatbots like ChatGPT, has the ability to engage in conversations with humans, explain complex concepts, create presentations, generate text, and even produce comics or illustrations. However, as AI capabilities continue to grow, concerns have arisen about the potential for AI to replace human jobs. Please write a composition of at least 500 words to explain both of the benefits and the drawbacks of using ChatGPT in human life and its far-reaching implications for the future. Additionally, how can individuals adapt to this evolving landscape?

2. 比賽時間：13:10~14:50，共 100 分鐘。

3. 不得使用任何形式的字典與電子載具，其餘依本校考試規定辦理。

The Impact of AI Chatbots on Human Life: Challenges and Personal Strategies

In the past, people couldn't imagine there was a robot that could do conversations like humans. But the coming of ChatGPT told us, a robot can chat with people, just like what we can do!

ChatGPT operates with a data space. When we ask a question, it can find a most suitable answer on the Internet and reply. If a question is asked by different people, each of whom will receive different answers. Namely, we can get a personal answer that can help us the most.

People can also use ChatGPT as a inspiration generating machine. If we have a project and have no ideas about where to start from, we can turn to ChatGPT. By typing a few questions, we can quickly learn some keywords or similar thoughts related to our project, using these informations to come up with new ideas or solutions and thus generate a new context.

Also, ChatGPT helps us easier to create a context. For example, if we make ChatGPT to generate a "touching love letter," it can soon provide a remarkable love letter to us. What we need to do is write down its answer and give it to someone we like. The whole process takes no more than an hour, since we don't have to think ourself. That sounds great, right?

Although we love the convenience ChatGPT brought to us, it has some drawbacks. First, student's might cheat by using ChatGPT. Writing a paper is never a easy task. But with the advent of ChatGPT, students can easily ask ChatGPT to generate a paper for them, and teacher can't tell

(more space in the back)

whether it is written by students or generated by ChatGPT. This can lead to serious problems such as students can't practice critical thinking during the process and the violence of rights.

Second, some jobs might disappear. Hiring a ^{several} human employer is more expensive than using a robot. ChatGPT can translate foreign languages immediately. By combining these two advantages of ChatGPT, companies will use robots rather than human to lower the cost and increase the efficiency.

Last, the data ChatGPT collect is from the Internet, including right informations and mistakes; some of its informations are out of date. Specifically, we're not sure whether the reports or answers are 100% correct, and have the possibility believe in wrong informations.

In the future, create an article or an essay ^{maybe} ~~is~~ ^{more} a trouble for us. Meanwhile, jobs related to text or translation might be replaced by ChatGPT, and demand of AI engineer might increase, leading to industrial structure change. Also, we will have more opportunities to use ChatGPT to complete our work. So, how can we adapt this change?

In my opinion, people should foster an expertise that ChatGPT can't learn or replace, and find a position in this society. In this way, others will see the value in us and the possibility to be replaced decreases. On the other hand, we should consider ChatGPT to be a "helper" not a "worker." ChatGPT is a good tool, if we use it correctly, we can learn a lot from it and accomplish our goal. Only by using it in right way can we live in a peaceful life with ChatGPT.
