

112 學年度高中部英文作文比賽

1. Title: "The Impact of AI Chatbots on Human Life: Challenges and Personal Strategies"

Instructions:

In recent years, Artificial Intelligence (AI) has taken the world by storm. AI, particularly in the form of chatbots like ChatGPT, has the ability to engage in conversations with humans, explain complex concepts, create presentations, generate text, and even produce comics or illustrations. However, as AI capabilities continue to grow, concerns have arisen about the potential for AI to replace human jobs. Please write a composition of at least 500 words to explain both of the benefits and the drawbacks of using ChatGPT in human life and its far-reaching implications for the future. Additionally, how can individuals adapt to this evolving landscape?

2. 比賽時間：13:10~14:50，共 100 分鐘。

3. 不得使用任何形式的字典與電子載具，其餘依本校考試規定辦理。

Artificial Intelligence seems to be more and more important in this modern world. Living in a society which changes rapidly every second, we have to be aware of the evolution of technology and consider its pros and cons in the meantime.

Obviously, it's widely believed that AI is capable of dealing with various tasks, but specifically, what are several advantages of it? To begin with, we can directly point out that AI does ensure efficiency in multiple respects. For example, AI can generate a number of articles in a blink of an eye, while human writers require weeks and months to publish complete works. Secondly, AI makes the knowledge become more accessible, so users can simply get the answers by texting to a chatbot. Another benefit is that people can make use of AI while seeking inspirations. AI can swiftly provide ideas or assist humans by searching sources online, which enables users to come up with more thoughts.

On the contrary, AI has its disadvantages as well. Firstly, an easier access to online sources and publications also means the rising possibility of copy issues. Besides, if people always make judgments and decisions depend on the information given by AI,

(more space in the back)

they will be likely to lose the self-learning technique, and forget the significance of fact checking and critical thinking. Thus, the effects which will be caused by AI can be quite predictable. Although it produces positive stuffs to the society, it may have negative impacts on our everyday life, too. What's worse, the unemployment rate may rise, since AI can replace human creators with robots.

If AI is such a vital thing now and in the near future, we should learn to adapt to the changing world instead of being afraid of it. I suggest that we should develop skills which robotic figures lack, such as empathy, more creativity, and ability to appreciate the world. We shouldn't ignore the value of humanity, for it's humanity that enables us to feel, to dare, and to be different from the technological devices. Humans are special due to their mentality and emotion, and that's what AI can't replace and cope with.

To sum up, AI like chatbots or ChatGPT provides people with convenience, but we should also remember its potential risks while using it. Additionally, always keep in mind that humanity has its importance is necessary.
